

Installation Instructions

IFD44 in steel casing with angle-free system in 75SSW Hebel wall

1. Position and fix damper into ductwork with steel screws - ensuring that the damper will be aligned and within the fire separating shaft wall once the duct is attached to the riser.
2. Seal internal gap between damper and duct with Kilargo Intumescent Mastic.
3. Mechanically connect duct to riser with steel screws or steel pop rivets.
4. Once protective shaftwall has been constructed, fire stop all gaps between the duct and shaftwall with Kilargo Intumescent Mastic (supplied separately). Ensure fill depth corresponds with those detailed in the System Drawing. Note: A maximum perimeter clearance of 25mm applies. If required use fire rated backing rod, positioned to control fill depth.
5. When connecting ductwork, ensure that an appropriate AS1682.2 compliant breakaway joint method is used.
6. Ensure convenient access is provided for visual inspection and cleaning as necessary.
7. Ensure product and certification labels are in a prominent position for easy identification during subsequent maintenance inspections.

Notes

1. Product must be fitted in accordance with this detail, including the use of Kilargo Intumescent Mastic to ensure compliance with Kilargo Fire Test Approval detailed.
2. Steel casing, angles, fixing screws and backing rod are to be supplied by others.

Building Element	Hebel 75SSW
Application	Mounted in riser branch angle free system
Maximum Size	300mm x 300mm
FRL	-/120/-
Test Reference No.	CSIRO FC01869

System No. **WH8**
